

## **Jhiamluka Solano**

### **Education Committee**

I am a cardiology resident at ST6 level, currently out of programme undertaking a DPhil at the University of Oxford. I bring over ten years of teaching experience across undergraduate and postgraduate settings, nationally and internationally. My training includes an MSc in Medical Education and GMC trainer accreditation, which underpin my work in curriculum design, supervision and assessment.

My research has focused on implementing innovative medical education methodologies in limited resource settings, translating theory into scalable and context appropriate interventions with demonstrable outcomes. This has involved close collaboration with multidisciplinary teams and institutional stakeholders to ensure both rigour and sustainability.

I am nearing completion of my term on the Council of the Academy of Medical Educators, where I have served on the Education Committee for the past two years, contributing to strategic discussions on standards and faculty development. In parallel, I serve as a regional representative on the Resident Doctor Committee at the Royal College of Physicians, with active involvement in curriculum development and assessment strategy.

I understand that education within a professional society must be academically robust, responsive to trainee needs and operationally viable. If appointed, I would focus on embedding contemporary medical education theory into BCS programmes and ensuring that innovation is implemented with clear evaluation, measurable outcomes and accountability.
