

Omer Ali

Digital and IT Committee

As a Cardiology ST5, I have integrated six years of clinical informatics leadership with my medical training. I am currently the clinical lead for an ambient scribing pilot on behalf of NHSE, Microsoft, and KPMG. Previously, I transformed our EPR from a widely disliked system into a high-performing tool clinicians are now proud to use, this was the result of constant, iterative liaison between the consultant body and my fellow junior doctors.

My strategic experience includes regional EPR procurement and national advisory roles. I'm a graduate of the NHS Digital Academy (MSc, Imperial/Harvard), as well as an alumnus of the national CCIO Advisory Panel and a Federation of Informatics Professionals "35 Under 35" awardee. Recently, I provided clinical input to the Deputy Director at NHS England regarding the digital workforce.

Having worked with my Trust's Chief Executive and Medical Director to bridge the gap between residents and leadership, I am uniquely positioned to serve the BCS. If appointed, I will act as an active conduit for the BJCA ensuring the Society's digital infrastructure, governance, and third-party contracts provide genuine value to the trainee experience. I aim to ensure a forward-thinking digital strategy that directly supports the professional needs of the modern cardiology resident.

I am committed to ensuring the resident doctor voice is central to the DITC's mission, leveraging my relationships with the CCIO and wider NHS digital community to ensure the BCS remains at the forefront of digital cardiology.
